

## **Job Site Preparation for Fireplace Installation**

	What plans does the installer have for dust containment and remediation?
	Will extra labor or equipment be used to ensure no damage to the home is incurred while the material is being moved?
	If holes in the home envelope must be cut, will there be an effective way to seal them to prevent water or air intrusion between work days?
	If unavoidable damage to the yard or home occurs, will the contractor repair or pay to restore the issues?
NOTES
