

Initial Burn: Gas-Burning Fireplace Installations

	After the air has been purged from the system, does the fireplace light immediately?
	Does the flame pattern appear normal? (i.e. no partial ignition, excessively blue flames, sooty flames, etc.)
	Do all accessories work as designed? (i.e. remote, interior lights, blowers, hot air distribution kits, etc.)
	Do any and all access/control panels open and close as they should?
	Does any optional high/low flame operation work as designed?
NOTES
